WEDNESDAY, AUGUST IP 1885

Terrible Warfare. Our equipment was the same as before, except that half of as carried a single 10 pound beenb instead of three 5-pound ones. We followed the shore on the southern side of the bay as far as Dalkey Island, which berders it in that direction. About a mile in the offing were visible the lights of a large steamer, the first of the line. We knew that the next one lay two miles beyond ber, but from that distance we could not make out her lights. Arrived at a point almost directly above the vissel, I halfed my little party and explained my plans, which were exceedingly simple. One of the men, bearing a 10-pound bomb, was to descend cantiously until he was near enough to drop his burden into the funnel, after which he was to rise noward again as fast as possible. The rest were ent was the same as before again as fast as possible. The rest were to remain in readiness to repeat the man-cuvre if it should fail the first time. The ted at once began the descent. and for a few moments we strained our eyes through the gloom, vainly trying to follow his movements. Presently a slight rattle was heard; there was a bright flash and a stunning report. The bomb had missed the funnel and exploded on the missed the funnel and expected of deck. For a few seconds there was dead deck. silence, then a confusion of many voices then a shot was heard, a rocket whinned in past us and burst into a thousand of the Louisiana lottery managers each monthly drawing is followed by skillfully ed up with moonday clearness an area of written remarkes about poor laborers or humbers than a mile. In the uncartifly glare ble farmers, who, as by the stroke of a magic more than a mile. In the uncertibly glare we could plainly see our comrade hasten ing upward to rejoin us. Before the intense brightness had gone cut there was a second report, another rocket came hurting and screaming right among us, and burst into great blazing stars above. The effect was indescribably magnificent, but saidly disconcerting to our plans. We work a wind the largest and most respectable, journals in the largest and most respectable, journals in the largest and most respectable, journals in the last journals with which would not, even the distinction so as to avoid burst into great blazing stars above. The effect was indescribably magnificent, but saidly disconcerting to our plans. We will be the role in several of our Southern W. F. Journal of Commerce. were confused and dazzied, and must have been plainly visible to those on board. Scatter, men, scatter." I shouted, as a third rocket came almost in the track of the second. It was plainly impossible to remain where we were, but in spite of the faming, sulphurous masses that were falling like a rain of fire around me, I balanced myself for a moment while I found with contributed for tickets. One half of the \$30, ed myself for a moment while I found with

ing its cause, she was throwing out lumi-nous shells on the side nearest the land It is to be said to the great credit of the Same and Same and Courses that it is proving a notable at a distance of about half a mile from the ship, diffused a bright light over the water, by which the smallest boat within the distance of a mile might have been distinctly seen. The ruttle of a drum beating to quarters came agrees the water, and it was clear that she at least would not be caught napping. But, while within a wide circle all was bright as day, the vessel herself all was bright as day, the vessel herself have been the contrast. Her lights had all been extinguished, and the only clews to her position were the frequent flashes of her mortar and the dull reports as shell been estinguished, and the only clews to her position were the frequent flashes of her mortar and the dull reports as shell arts shell was sent up. This was the very thing we wanted. The darkness in which she was shrouded was necessary to our success, while the intensity of vigilance with which her crew scanned the surface of the water prevented any sye being turned toward the sky. With a low whist is I beought all my men around me, and in a few words, directed one who carned a large shell to descend low over the vessel, and make quite sure that it dropped into the funnel. He was then to shoot away to the dark side as quitckly as possible. The rest of as ascended to a greater height, keeping as directly over the deem ed ship as we could in the darkness. For a few minutes, which seemed an age, we wanted, looking down. No grander or more striking spectacle could be imagined than the four gays, the quick flashes of the mortur, the intense blaze of the bursting shells, the quiwning lights foo, and so brightly was the surface of the water discontinually was the surface of the water discontinual to throw up. The third sing was now hurning lights too, and so brightly was the surface of the water discontinual to throw as a surface of the water discontinual to throw as a surface of the water discontinual to thou as a surface of the water discontinual to throw as a surface of the water discontinual to throw as a surface of the water discontinual to throw the chief of the distance of the water discontinual to throw the chief of the distance of the

head of a swimmer must have been seen.
But we had not long time to admire this brilliant display. We could not follow our comrade's movements in the darkness which fortunately enshrouded him. But after some minutes of suspenses a long time to seen their columns to the District of Columbia itself accept long accept and right at the seat of the Government would be a good place to begin the strict execution of the law.—Springfeld Republicus. brightly was the surface of the water dis-played that even so small an object as the comrade's movements as which fortunately enshrouded him. But after some minutes of suspense a deep, thunderone sound was heard, followed, after a few moments, by loud, confused shouting. The firing ceasest: the light of the last shell went out like a dying lamp; and through the darkness a horrible, rush and through the darkness a horrible, rush to them having died out; owing perhaps, to the introduction of railways and School Boards. These in the north of England, only the control of the control men, in awe struck tones; "I guess that shell has blown a hole in her bottom. Say, Captain, shall we go and try the other one! We may as well make a complete job while we are about it." Jules Verne.

Cancer-Cure and Cancer-Curers.

atmeg, and dry in the sun.

The successors in London to Plankett and dry were Dr. Pattings and Dr. Felf, more who, Gray were Dr. Pattisses and Dr. Felf, more who, we are sorry to say, flourished as footness by victure of American diplomas. These men also naed an external application, the hasis of which was chloride of upp. To this Dr. Felf added sangulances. Damas had peniod a specific known as Lord Arambel's shoreer-care was also extensively acrd. It commented of a contrastry sublimate weak and an arraneous powder. In 1856 Specior Wells showed the insufficy of the methods of a victical cancer-carer known as Eer. Mr. Reed. This gentieman made large same of meansy by his presented remedy, which some in have comested mainly in the foreign of chlorine gas against the braner.

But the prince of cancer-careirs of all ages was Landolfs, of Naples. Flourishing about thirty or farty years upo, he practiced his

cons of Arnott deserves commendation. Rubbing, friction and compression are useful measures in some forms of cancer. Boyle reports sevenity-one cases nut of one bundred and twenty-soven cured by compression. Carrott poultions, introduced by Salizar in 1708, and revived by Marsden, are speken of by some authorities. The use of either the carbonate or cayphoaphate of iron, the internal and external use of arsenic, the injection of accide acid according to the method of Broadbest, are asseng the best measures recognized as of utility in the treatment of caseer. Spencer Wells believes that bromide of potassium and cod-liver oil are the two best things to be employed, but he also speaks highly of sedies, iron, and respecially of the todicle of arsenic.

Despite all, we are no nearer curing cancer than the were use hundred years ago. We can postpose death, relieve suffering, and make its more tolerable. In a small porcent of cases the use of the kuife resoves the disease permanently; and to the kuife resoves the disease permanently; and to the kuife belongs, so far, the chief triumph in the therapeutics of carrieroms.

Cancer is a diathet disease, and a specific causes of the development of the dread disease and in preventing its appearance. Meanwhile cancer quacks will thrive, because man wants to live, because bope will need de and because the disguosis of cancerine from other tumors a not easy. Most cases of ulcerating "canters" carred by quacks have been cases of philips, while attentions to the cases of upon the cases of u is not easy. Most cases of electrifing "can-cers" cured by quarks have been cases of syphilis, while the other "cures" are cases of the malignant tumor.—Mexical Entert.

ction, particularly in Savannah. Is that cily the gambling spirit has been steadily on the increase for years, until it is computed that fully \$500,000 has gone to earlich the hallow ed myself for a moment while I found with my plumb line a point exactly over the ship. Then I loosed my 10 pound shell from its sling and dropped it. I heard the crash of its fall upon the deck, and a deep muffled explosion, which told that it had broken through and burst below. I did not wait to see the end, but, striking off at my utmost speed. I blew a shrill biast on my whish, to raily my followers and held my course toward the next ship. It was not easy now to make out her exact position. Evidently aroused by the commotion, though probably not understanding its causes, she was throwing out limit one of \$0.000 annually as a dismal tribute to this vice.

It is to be said to the great credit of the

to the introduction of railways and School Boards. Then in the north of England, only a few years ago, it was usual to carry "the dual with the sun" to the grave—a practice corresponding with the Highland usage of making "the deant," or walking three times around a person according to the course of the sun. Ourse covering to the course of the sun. Ourse covering in the cities and the course of the sun. Ourse covering in the cities of the ann. On one occasion, in the village of Scran-ton, near West Hardepool, the vicar was stand-ing at the church yard gate awaiting the ar-rival of the funeral procession, when much to Cancer-Cure and Cancer-Curex.

The discovery of "cancer cures" begun in the last century and has been pursued with unremitting industry to the present day. Presented to the possession of a specific can even now get wealth by liberally advertising in religious weeklies, but fifty and one hundred years ago they got fame and honor also. The cancer-curers have been the most numerous of all quacks.

In the latter part of the eighteenth century there were two famous men of this class in Lemdon, named Plunkett and Gay. They "cared" cancer by the application of a pusity known as Plunkett's Position. Lord Belling, broke, who had a rancer of the face, was one of the victims, his death being hastened by this positive. Plunkett, who weren to have himself believed in his remedy, finally published the formula, which is as follows: E. Crow's foot, one hamiful, dog fenous, three springs, well pounded, crude brinsmone, three midding thumblefuls; white a resourc same cfancerated ground, but on the saccinary. This does not mean in unconsecrated ground, but on the saccinary. The does not mean in the church, or in a remote corner of the church yard. The origin of this prejudice is said to have been the notion that the northern part was that which was appropriated to the interment of undaptined indents, excommunicated prevents, and the first was none. part was that which was appropriated to the interment of unbaptised infants, encommunicated persons, or such as had fail violent hands upon themselves. Hence it was popularly known as the "wrong side of the church." In many parisines therefore, this spot remained unoccupied, while the remaining portion of the church yard was drowded. White, in his "Bistory of Selbourne," alloding to this superstition, says that as most people wished to be buried on the south side of the churchyard, it became such a mass of mortality that no person could be interred "without distarting or displaying the bones of his ancestors.

mainly in the foreing of chlorine gas against the humor.

But the prince of cancer-carrier of all agree was Landolfs, of Kaples. Flouraling about thirty or firsty years ago be practiced in timbody. A curious sarrying custom intry or firsty years ago be practiced in the make a continual of the most principle of the most principle

whenever they pleased, for longer or shorter periods, as the conditions admit-ted.

What Is Head on a Coin

One of our contemporaries, a few days since, asserted that the side bearing the date is always the "head" of the obverse side. This is an error, since the dating of coins is comparatively a modern invention, while the tossing of coins to decide disputes or to settle ing of come to decade disputes or to settle mooted question is very ancient, and the questions wheads or tails" has been in use longer than the custom of insorthing on the coin the year of issue. There was also a very old English expression equivalent to it, and known as "cross or pile," in allusion to the English coinage which bore on one side at cross, and n the other side a device which was ile or punch used in making the coin Romans used to toss the coin and call on "capita aut navim" - bearls or ships - in allo sion to coins bearing on one side the lessel of James and so the other the prow of a ship. To there is a king's bend, and on the other the bead of his queen, or of an inferior person, the former is the obverse and the latter the reverse. If the devices and inscriptions on coins are very rare, but where one is used, and there is any doubt as to which side is the more important, and therefore is the obverse, wand, awake to find themselves wealthy. These accounts have even found their way hand upon the distinction so as to avoid a into the largest and most respectable journals possibility of dispute. It is a common trice methods of gain to carry such a doubtful coin and always insist that the side which fall

appermost gives the victory in their favor.-Approaching Earthquakes

The earthquake shocks which were felt laweek over a wide area in Yorkshire remind a that an authority on the subject of those phehat an authority on the Paris is of consomers, M. Delaunay of Paris is of consomers of that rext year will see the recurrence of beavals of the earth's crust in an intenform. M. Delaumay is a prophet of exil, bu unfortunately all his prophecies have hitherto come true. His specialty is earthquakes, and be predicts them only too surely. In 1877 announced that that year would not concle without violent disturbances of the earth, an as a matter of fact, two frightful catastrop on the cousts of South America followed. 1883 M. Delaunay again pointed to approx ing carthquakes, and some after the volcatic eruptions in the Indian Archipelago occurred by which thousands of human beings los their lives, and hundreds of square miles of terra firms were engulied by the sea. To-ward the end of last year M. Delaunay once more raised his warning voice, and the ea quakes in Spain proved how well four were his warnings. Quite recently he
